

Norwegian employment by AI-exposure quintile, February 2026

Q4 + Q5 (top 40 % of occupations) hold 38 % of total employment

Notes: Employment counts for ages 22–69 in February 2026. Quintiles are equal-occupation: each 4-digit STYRK-08 code counts once, with Q5 containing the 20 % of occupations with the highest Eloundou et al. (2024) GPT-4 β exposure scores. Under equal-employment quintiles every bar would sit at 20 %. The 0.6 % of employment in unmapped occupations (military, clergy, small specialties) is excluded from the shares. Source: microdata.no.
