

Norwegian employment by AI-exposure quintile, monthly, 2021–2026

Q5 averages 18.7 % of employment; Q4 + Q5 averages 37 %

Notes: Monthly shares of total Norwegian employment (ages 22–69) in each Eloundou et al. (2024) GPT-4 β exposure quintile. Quintiles are equal-occupation: each 4-digit STYRK-08 code counts once, with Q5 containing the 20 % of occupations with the highest exposure scores. Under equal-employment quintiles every line would sit at 20 %. About 0.6 % of employment in unmapped occupations (military, clergy, small specialties) is excluded from the shares. Microdata.no extract covers January 2021 through February 2026. Source: microdata.no.
