

Employment of Q5 (most AI-exposed) occupations vs. Q1, by age cohort firm-FE event study, per-capita rate (linear OLS)

% of Q5 cohort employment rate at October 2022

Sample: private-sector foretak (sekt = 3), 22–55-year-olds, 2021m1–2025m7. Specification: $\text{reghdfe rate} = \text{count} / N(\text{age, month})$ on $i.k \times i.ai_q$, absorbing $\text{foretak} \times q$ and $\text{foretak} \times \text{month}$, weighted by SSB cohort population, clustered at foretak. Estimated separately per age bin. Reference: October 2022 ($k = -1$, omitted) and Q1 (least exposed, omitted). Dashed red line: November 2022 (GPT-4 era). Tick marks at January of each year. Shaded band: 95 % CI. Y-axis: $\gamma_{\{Q5,k\}}$ divided by Q5 cohort employment rate at October 2022, times 100 (% of Q5 baseline). Shared across panels so age groups are directly comparable. Source: `from_secure_server/coefficients/coef_event_study_share.csv` + `baseline_kref_by_age_q.csv`.
